

SECURES A WIDE RANGE OF CABLE SIZES

IMPACT RESISTANT RUBBER WITH SIMPLE INSTALL

FORMS TO VIRTUALLY ANY FRAME SHAPE

DESCRIPTION

The FLEXROUTE® is a universal, durable, and simple cable management solution that secures and protects both the tube and cable. It is here to provide security in your applications. While it continues to utilize the great fastening capabilities of a cable tie, it goes a step further and flexes around a tube providing uniform traction that a cable tie just can't accomplish on its own.

BENEFITS AND FEATURES

- **DYNAMIC CABLE SUPPORT** Naturally forms to and secures a wide range of cables
- **RECESSED CHANNEL** Provides the commonly used 5mm wide cable tie with a fitted and recessed channel to avoid any longitudinal rolling along the frame during use
- **FLEXIBLE ARMS** Will form to virtually any frame and provide a high friction surface that will secure the cable laterally and never shift or scratch the frame
- **SIMPLE INSTALL** The open cable portal allows for quick application
- **DURABLE MATERIAL** Made from flexible, strong, and impact resistant rubber compound used in power tool grips, outdoor equipment, and in extreme temperatures and environments.

MATERIAL AND VOLUME

The FLEXROUTE® is made of UV rated TPV flexible impact resistant rubber and comes in various sizes of packs, some including Low Profile cable ties.

	Description	Cable tie	Min. cable diameter (mm)	Max. cable diameter (mm)
FR1001	Standard	Not included	4.6	6.5
FRP1005	5X FR1001	8 pcs. L11S0C		
FRP1010	10X FR1001	15 pcs. L11S0C		
FRP1015	25X FR2001			
FRP1020	100X FR1001	Not included	7.14	9.5
FR2001	Flexroute XL			
FRP2010	8X FR2001	8 pcs. L11S0C		
FRP2015	25X FR2001	Not included		
FRP2020	100X FR2001			

SIZES

Since tubes vary infinitely both in shape and size, the idea was to make something that was strong and durable, but able to adapt to a range of tube types and cable diameters.

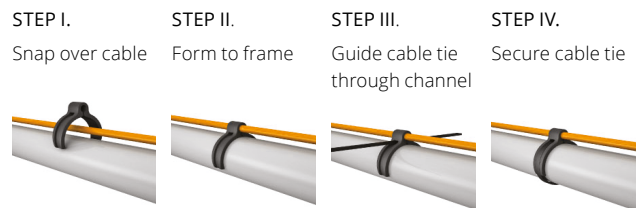

The FLEXROUTE® Standard accommodates cables from 4.7mm – 6.5mm

The FLEXROUTE® XL accommodates cables from 7mm to 9.4mm

APPLICATIONS

The FLEXROUTE® cable guide's patented design is ideal for any application requiring a safe impact resistant cable fastening solution. It applies in a wide variety of industries, commonly automotive, technological, maritime, cycling and general industrial applications.

Note the FLEXROUTE® is not intended for load bearing application. The FLEXROUTE® is only intended for use with a 5mm wide cable tie. Do not use if failure of either the FLEXROUTE® or the cable tie would cause damage or injury.
